

HOLIDAY PARK SERVICES

WHOLE SYSTEM APPROACH

Enviss takes a whole of system approach to determining and solving water problems.

Our engineers look for underlying causes rather than recommending products that treat the symptoms.

Our holiday park experience covers a range of common water related problems:

- » Pumping issues
- » Treatment performance
- » Treatment capacity
- » Effluent disposal
- » Odour issues
- » Leaks and blockages
- » Risk management

When recommending solutions Enviss considers a range of factors to ensure long term operational improvement and sustainability of your park.

- » Costs, upfront and ongoing
- » Operation and maintenance
- » Impact of future development
- » Impact of busy and quiet periods

ODOUR MANAGEMENT

Odour issues are common with ageing onsite wastewater systems. Enviss engineers locate the source of the odour and then design a customised solution.

Enviss manufactures and installs a range of odours management products, including:

- » Sealed pit access covers
- » Odour absorbers
- » Passive and mechanical ventilation

PROJECT MANAGEMENT

Enviss can manage your wastewater project at all stages of the project.

- » Site investigation
- » Design
- » Installation
- » Commissioning

PUMPING

Sewage pumping is a common source of problems. Enviss solves ongoing pumping issues by thoroughly investigating the causes.

- » Blockages
- » Poor pumping capacity
- » Pump failures
- » Automation and control failures

EFFLUENT DISPOSAL

Treatment of effluent is not the final step in management of onsite wastewater. Enviss advises on disposal strategies for treated effluent.

- » Landscape irrigation
- » Agricultural irrigation
- » Fire service water

TREATMENT SYSTEMS

Reliable and effective onsite treatment of wastewater is critical for parks without sewer connection. Enviss provides services to ensure systems comply with discharge requirements.

- » Inspection and reporting of existing system performance and capacity
- » Water sampling and analysis
- » Automation repair and enhancement
- » Plant upgrades or replacement

TREATMENT TECHNOLOGY

Enviss provides the most effective biological treatment technology to upgrade or replace existing systems. Highly efficient, compact and achieves excellent reductions in:

- » BOD
- » Nitrogen
- » Phosphorus

COMPANY PROFILE

Enviss is a water and environmental engineering company specialising in the filtration and treatment of polluted water, wastewater, pollution control and water management.

- » Sewage treatment
- » Industrial wastewater
- » Construction water treatment
- » Urban stormwater
- » Water management and design consulting

CLIENTS

Enviss' clients range from family owned and operated parks to large corporate management groups located across Australia.
